1 DESCRIPTION

Trellidor A200, a fully framed expanding sash moving within a frame in single, double or multi sash configuration. The sash and frame components to be constructed from mill flattened steel, galvanized to a minimum standard of Z 275, and roll formed to lipped channels. The steel to be powder coated prior to assembly, with exterior grade polyester. The bottom sill to be anodized aluminium to 25 microns or greater, and powder coated to suit other components if required, to be self cleaning

and to be securely attached to the moving sash and frame. Steel sections forming sash and frame components to be securely connected with Olive drab coated steel rivets. Lock to be two point locking through a single key point mechanism. All fixings to be approved for on site application and to be tamperproof. The manufacturer to carry a current ISO rating. The installers to have the required on site Health and Safety certification.

3 CERTIFICATION

Police Preferred Specification

Secured by Design is the UK Police flagship initiative supporting the principles of designing out crime. Secured by Design licensed company status is awarded to those companies producing

security products, including doors and windows, which pass standards and tests nominated by the police service as 'Police Preferred Specification'. The LPCB's testing and certification against LPS 1175 is considered to be an acceptable standard to qualify for the Secured by Design license and to allow a company to use 'Police Preferred Specification' in relation to its products.

Secured by Design (SBD) is the corporate title for a family of national police projects involving the design for new homes, refurbished homes, commercial premises, car parks and other police crime prevention projects.

It is primarily an initiative to encourage the building industry to adopt crime prevention measures to assist in reducing the opportunity for crime and the fear of crime, creating a safer and more secure environment.

Secured by Design supports one of the Government's key planning objectives - the creation of secure, quality places where people wish to live and work.

Secured by Design is supported and managed by the Association of Chief Police Officers (ACPO) and has the backing of the Home Office. It has been drawn up in consultation with the Department of Transport, Local Government & Regions (formerly DETR) as well as trade, industry and standards organisation.

4 SIZE

Trellidor A200 can be applied to any width of aperture. This is achieved by means of multiple stacks on a single track which lock into each sash as in a multiple- or flexi- configuration.

It is not recommended to exceed 6 metres for each single sash and 12 metres for each double sash. Also refer to side by side configurations.

5 ASSEMBLY

6 CONSTRUCTION

The exterior components and bottom track are located and fixed to form a rigid frame. The trellis sash running in this frame consists of vertical steel components joined together by means of horizontal

rows of links. The linkage across the vertical upright pairs is a unique feature of the barrier construction developed by Trellicor, giving both uniformity of operation and added strength.

THE FRAME CONSISTS OF

A	Strike Jamb	Galvanised steel, powder coated
B	Top Track	Galvanised steel, powder coated
C	Anchor Jamb	Galvanised steel, powder coated
D	Bottom Sill	Aluminium

05 STRIKE JAMB

Utilised to minimize intrusion into the aperture space. Often used where unit is fitted next to aluminium patio doors with Slimline frames.

35 STRIKE JAMB

Used when key position relative to the door/window frame has reasonably free/clear access. Also reduces intrusion into aperture clear space when unit is open.

55 STRIKE JAMB

Utilised where positioning the key point away from the wall is important. Often used on doors to clear the frame.

6 CONSTRUCTION CONT

TOP TRACK

ANCHOR JAMB

6 CONSTRUCTION CONT

ALUMINIUM BOTTOM SILL

Mainly used in door applications, but can also be used in window applications where requested.

Anodised natural to 25 microns (Can be powder coated) Width 45mm Height 15mm (Refer 1A).
This track may also be sunk into the floor (Refer 1B).

HINGED UP ALUMINIUM SILL

The hinge assembly for the bottom sill enables hinging of the track up into the vertical position, thus leaving the floor area clear of any obstructions. This enables cleaning and free movement of wheeled objects through the entrance or opening being secured. The hinging assembly as illustrated is constructed from galvanised mild steel. The assembly can also be ordered chromed. The latch assembly can be installed to operate from either side of the door. When in the open position with the sill hinged up, the hinged section of the sill will hold back the stack.

6 CONSTRUCTION CONT

TRELLIS SASH

6 LOCKS

STANDARD LOCKING MECHANISM

TRELLILOK (Patented)

This unique patented lock was specifically designed for the Trellidor product range and provides dead locking for added security. It consists of a single throw, single key point mechanism with multi-point locking locations.

EUROLOCK (Patented)

Where the Trelllok has to match an existing locking system with identical keys, the unique patented Euro-lock is available.

This lock will accommodate any euro profile cylinder and this must be specified when ordering.

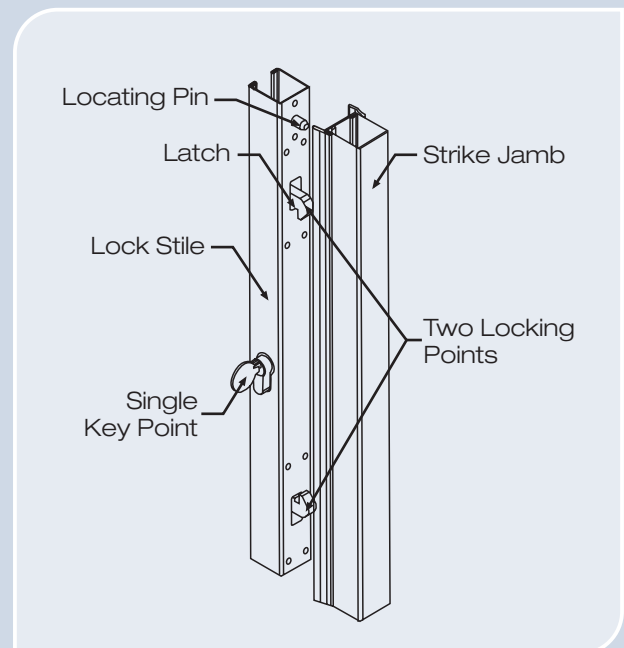

TRELLILOK

TRELLIDOR SLAM-LOCK (Patented)

Trellidor product and incorporates the Trelllok Technology. It consists of a double-throw Trelllok, giving multi point locking from a single key point, with 3 modes of operation (from convenience to security).

- **Open Mode:** In this mode the unit can open and close freely. No locking takes place which prevents accidental lock-out.
- **Slam-Lock Mode:** A single turn of the key engages the Slam-Lock action. The door is now 'armed' and ready to be Slam-Locked.
- **Dead-Lock Mode:** After closing the door in the Slam-Lock mode, turn the key one more time and the door is now 'Dead-Locked' which prevents the latches from being lifted.

TRELLIDOR SLAM-LOCK

6 LOCKS CONT

STANDARD LOCKING MECHANISM

CYLINDERS

The above locks are activated by means of 5 pin cylinders through customised cams.

The cylinders come in a variety of options:

- Full cylinders: Operated from both sides – usually door applications.
- Half cylinders: Operated from one side only – usually window applications.

These can be configured:

- Random (all keys differ)
- Matching (keyed alike)
- Dependent (full and half cylinders have the same key)

and/or in combinations of the above.

7 OPTIONS

DOORS

ANGLE JOINED

Trellidor A200 can be made to meet at any angle. These are manufactured as double units with the two sashes locking into one another at a specified angle from 90° to 180°.

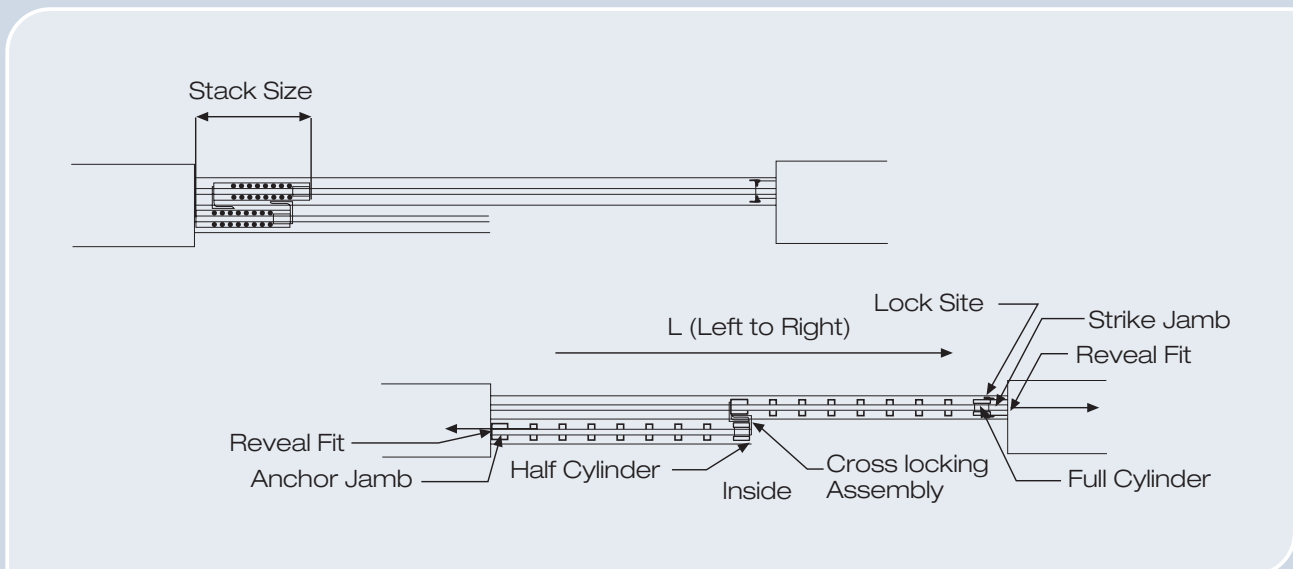

SIDE-BY-SIDE

The side-by-side Trellidor A200 is available in single and double configurations.

- The unit is designed primarily to maximise the reveal clearspace and minimise stacking size by running two or more cross locking Trellidors parallel.
- Ideal for shop fronts in malls, shop windows, passageways etc.

Sash sizes are limited to 6000mm per sash.

Cross locking is standard to provide greater security when the Trellidors are in place.

7 OPTIONS CONT

DOORS

HINGE AWAY

- The inclusion of a heavy duty hinge mechanism into the single or double Trelidor allows the door stack to be swung away giving wider access through the reveal.
- Ideal in passageways, smaller doorways and entrances needing full reveal access etc.

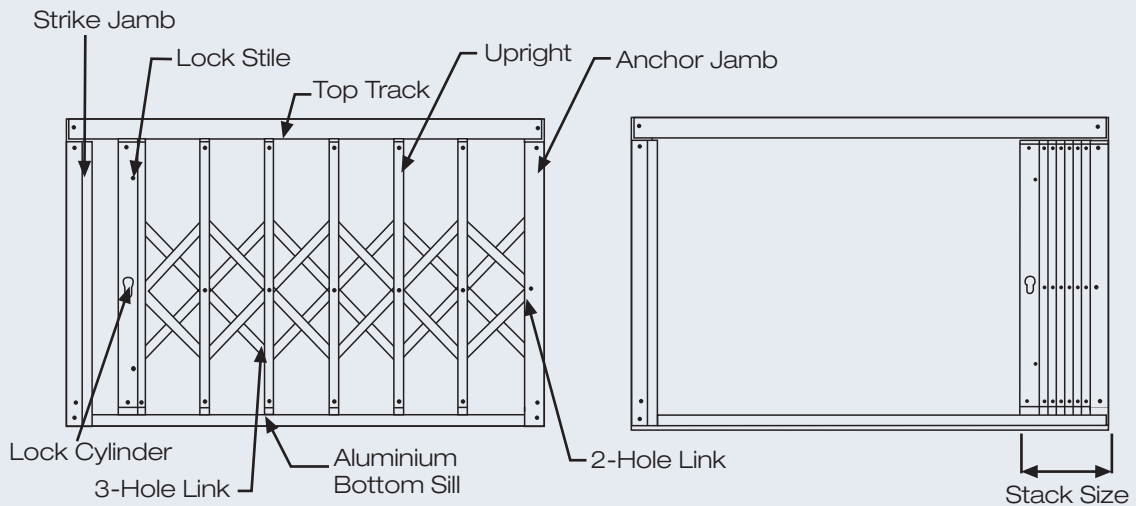

7 OPTIONS CONT

WINDOWS

SLIDING

- Fully framed in galvanised steel and made to fit windows of all sizes.
- Covers the complete window and retracts away when not needed, offering an unobstructed view.
- Available in single, double, single flexi or double flexi configuration, to make window cleaning easy and provide an escape route in the event of an emergency.

FIXTURE (NON-OPENING)

- Fully framed in galvanised steel and made to fit all window sizes.
- Protects opening and fixed window panes.
- Allows for air circulation with your security in place.

8 CONFIGURATIONS

STANDARD CONFIGURATIONS

SINGLE SASH TRELLIDOR A200

One side of the trellis sash is fixed to the anchor jamb, with the other side moving across to lock onto the strike jamb. The direction of close can be left to right or right to left as required

DOUBLE SASH TRELLIDOR A200

Double doors have two sashes, stacking one on each side of the unit which closes towards the centre. The split is usually central (50/50), but can be offset to either side as required.

SINGLE FLEXI SASH TRELLIDOR A200

Constructed with a lock stile and strike jamb on both sides of the unit enabling the stack to be positioned anywhere within the frame. This facilitates cleaning of windows.

DOUBLE FLEXI SASH TRELLIDOR A200

As per the single sash flexi but with the sash split into two interlocking stacks. This enables each stack to be independently positioned. Each sash locks into the strike jamb at each end of the unit and locks at the centre point as well. Especially designed for large commercial applications.

FIXED SASH TRELLIDOR PLUS

The trellis sash construction is fixed to the anchor jamb both left and right as the ability to open is not required in such units.

9 FINISHES

Trellidor A200 grilles are available in an attractive stock range of colours (as indicated below), utilising high quality ultra violet resistant polyester powder, suitable for interior and exterior use. Additionally they

can be supplied in any standard RAL number and can be matched to decor or corporate identity. These colours are representative only. For an exact match please call for a swatch.

STANDARD COLOURS

NON-STANDARD COLOURS

SPECIAL COLOURS

10 INSTALLATION

COACH SCREWS

Customised coach screws are used to secure Trellidor A200 by means of a specially designed torx drive attached to a flexi-spanner.

FIXING OPTIONS

Reveal Fixing – Secured into the walls from all sides.

Face-on Fixing – This is used when the unit is secured to the face of the aperture. This enables arches to be secured from the inside while maintaining the arched effect from outside.

Other Fixing options include

- face-on to reveal
- face-on to free standing
- reveal to free standing
- free standing

Accessories required to carry out the above fixing options will depend upon on-site conditions and the aperture to be secured. Such accessories could include custom brackets, standard brackets, beams, posts, cover strips. For standard accessories refer below.

INSTALLATION

All units supplied with standard concrete fixing kits.
